

BAMS - ISEC Loki Software Upgrade 1.0.0.2

BAMS – ISEC Loki Software Upgrade 1.0.0.2

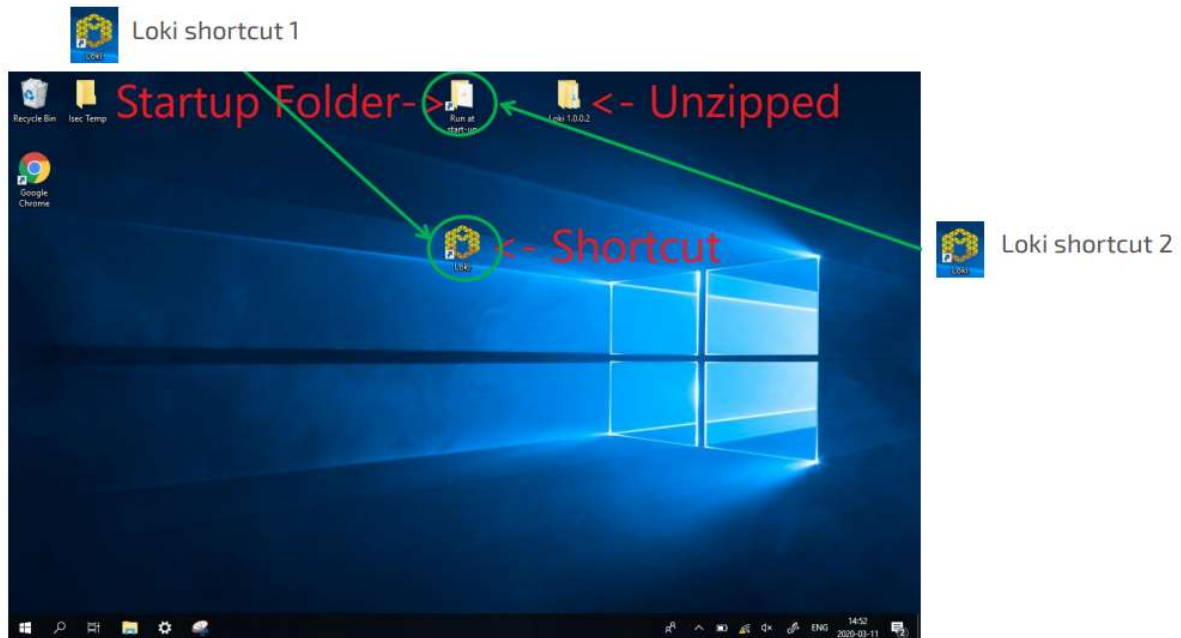

1. Place the ISEC Loki v1.0.0.2 files (unzipped) on a thumb drive. Place thumb drive in the Loki Tablet
2. On the Loki Tablet – find the old Loki shortcut on the desktop and delete this shortcut
3. Open the folder on the desktop 'Run at startup', delete the shortcut in this folder

4. Copy the ISEC file from the USB to the Tablet desktop (location is not important but more convenient)
5. Open the Loki_1.0.0.2 folder, go into the release folder, click on the Loki.exe file, select "Create Shortcut". Do this twice to create 2 shortcuts.

5. Move one of the shortcuts recently created on the tablet desktop.
6. Move the second shortcut into the Startup – Folder (in order to ensure auto starting of the Loki software when starting the Tablet)

7. Restart the tablet and login. The Loki application should auto start.
